

Case Study:

# Tested Supply Chain Partner

*New Vision's full suite of capabilities allowed a **TEST & Measurement EQUIPMENT** manufacturer to consolidate its supply chain*

## Challenge

- ❑ Customer was experiencing assembly difficulties
- ❑ Component parts were very complex, and the customer was procuring from multiple sources
- ❑ Tolerance stack up and precision fits were difficult to achieve by bringing parts in from multiple suppliers

## Solution

- ❑ New Vision Industries had the capability to manufacture all the components under one roof. Our engineering group identified opportunities to fit and kit parts prior to shipment reducing customer labor and in-house rework
- ❑ The team at New Vision also developed functional gauges and assembly aides to help the customer streamline their assembly process saving vast amounts of time while reducing nonconforming assemblies

## Benefit

- ❑ New Vision's ability to manufacture all the parts in a single facility reduced the burden on the customer's material procurement group. Our Kanban management solution ensured that the customer was able to maintain stock on all the required items to meet their deliveries

**In partnering with New Vision Industries, our customer was able to save on procurement, freight, direct assembly labor and scrap reduction.**
